Emoji Guidelines for the Even Realities Discord Channel

Intro

These guidelines help community members create pixelated emojis that feel cohesive and recognizable as part of Even Realities' visual language. They give everyone a shared foundation to build from, while still encouraging individual creativity, personal style, and expressive interpretation—so our emoji set feels both unified and shaped by the community.

Emoji Basics

Best Practice

—Create a 20x20 px art board for each icon. (recommended tool: Figma)

—Set up your workspace to snap to pixels and round values to whole pixels to avoid corrections later.

—Use the rectangle tool instead of the line tool to avoid placing vectors on half pixels.

—Be mindful of automatic alignments, which can result in vectors of uneven or half pixels.

—Flatten and merge all pixel units for better re-sizing.

—Avoid overly complex shapes and aim to simplify forms as much as possible.

Framework

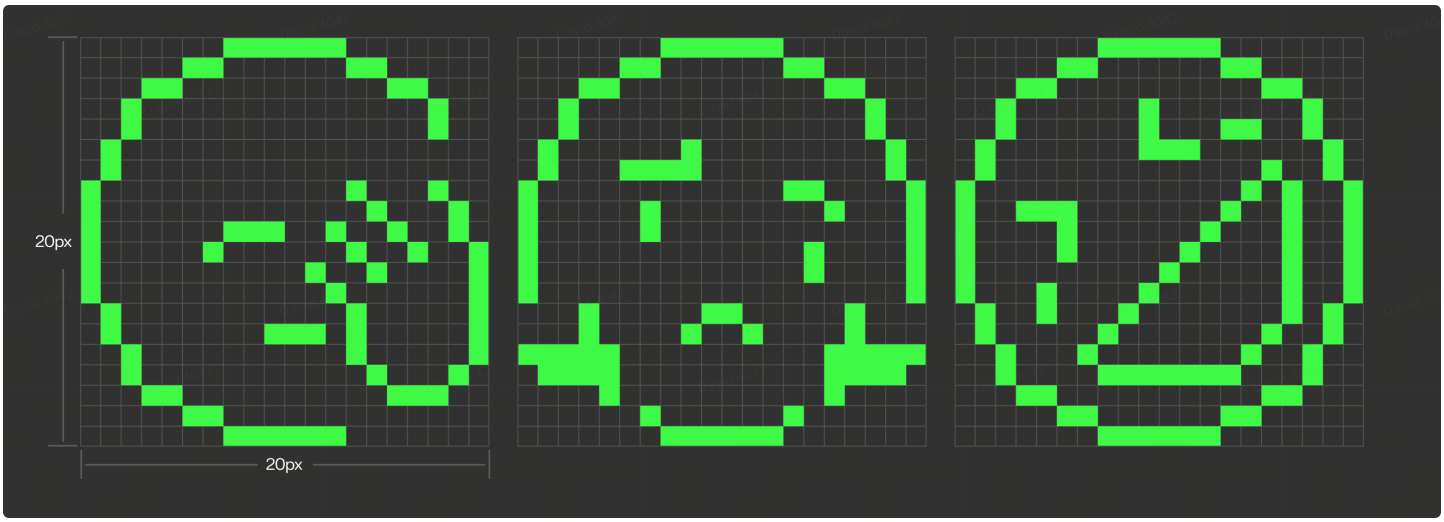
—Base grid:

For uniformity, the Even emojis are crafted on top of a foundational **20x20 px grid**. It is advised to employ this grid while designing emojis to ensure a cohesive and practical visual presentation.

—Padding:

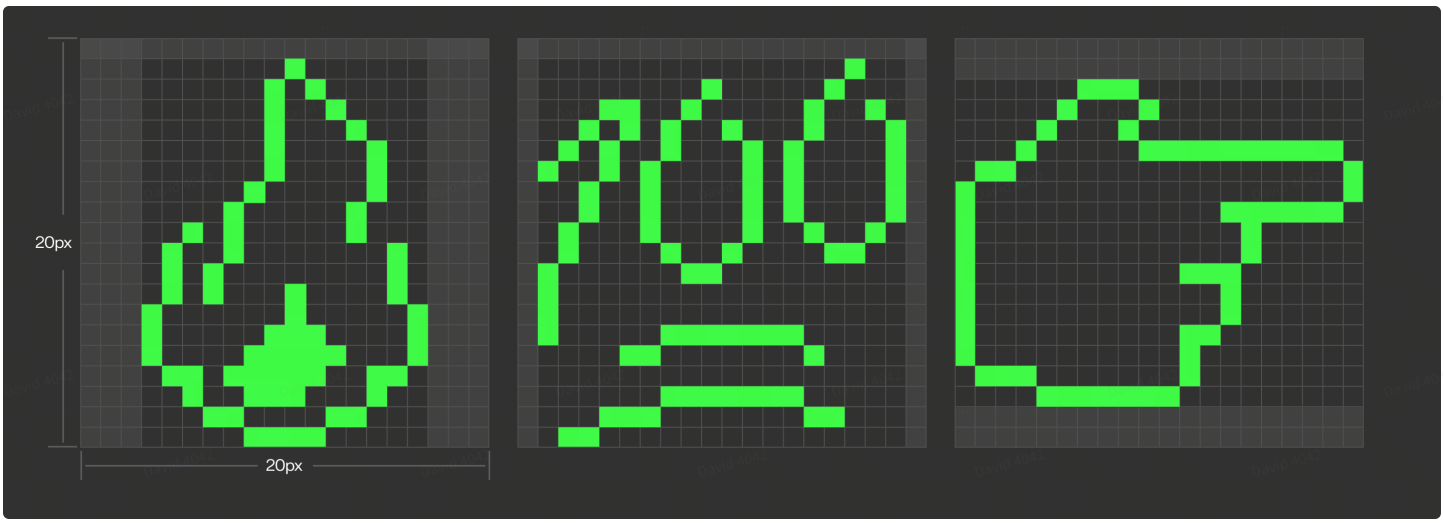
Face emojis should be designed with **no padding**, fully utilizing the 20×20 px canvas.

Examples:



For other emoji types, filling the 20×20 px canvas is **encouraged but not required**. You may adjust padding as needed to preserve visual balance and clarity.

Examples:

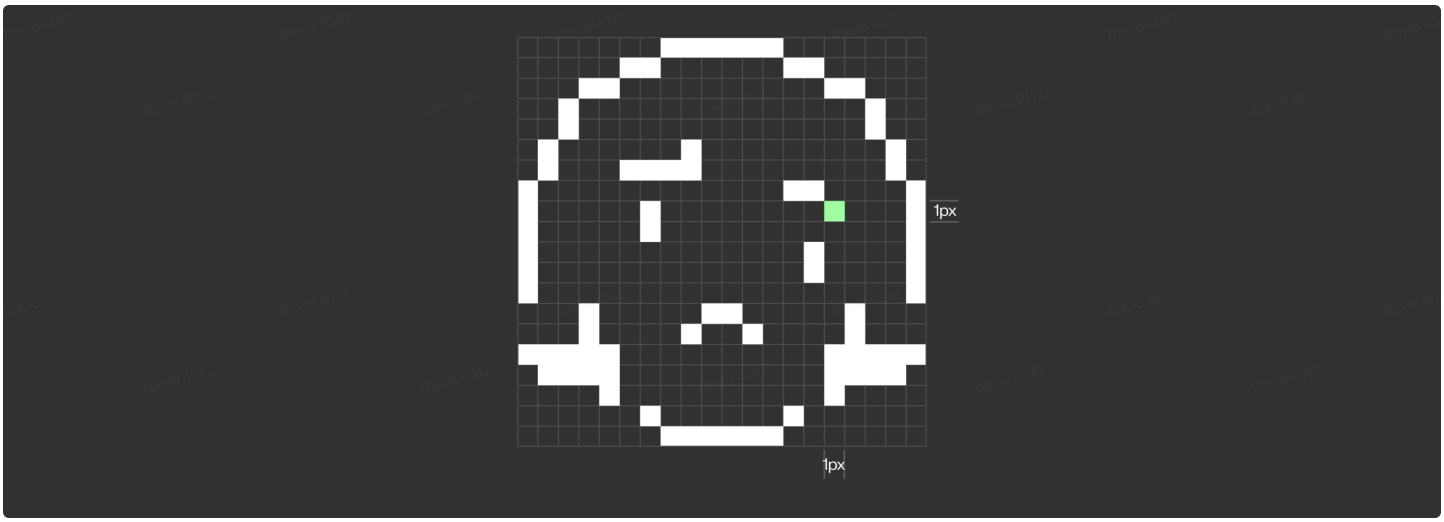


Unit

—Pixel Unit:

Use a 1x1 px unit to draw the emojis, as this gives the best consistency across all emojis.

Examples:



Color

Emojis use the hex color #3DFA44 to maintain brand consistency and ensure clear visibility.

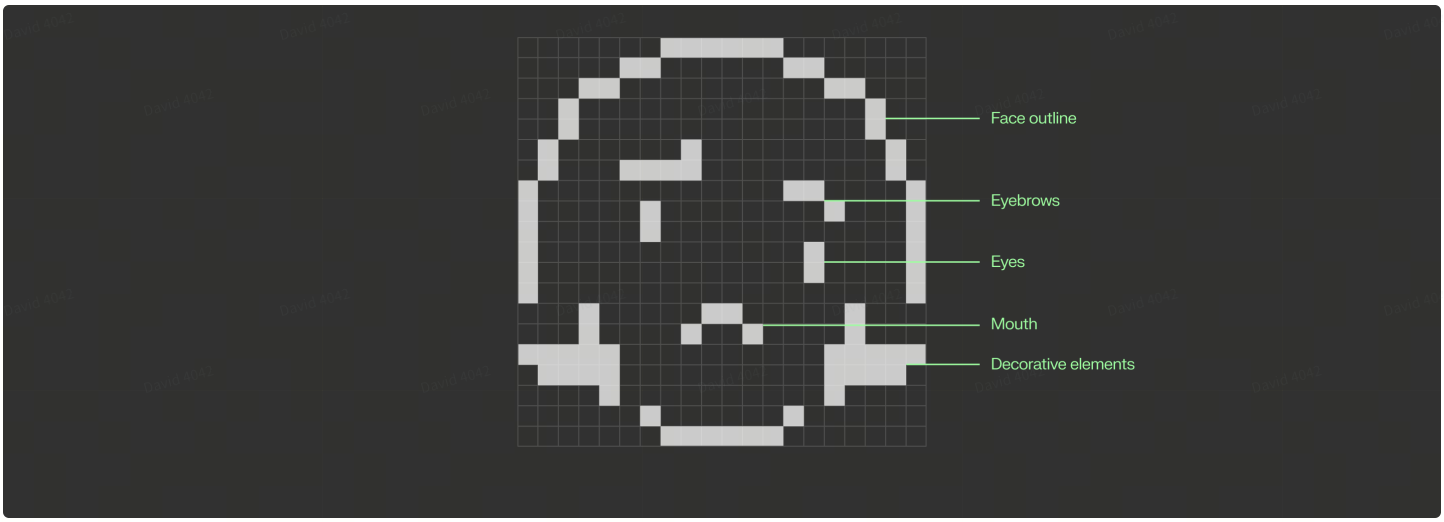
Facial Expressions

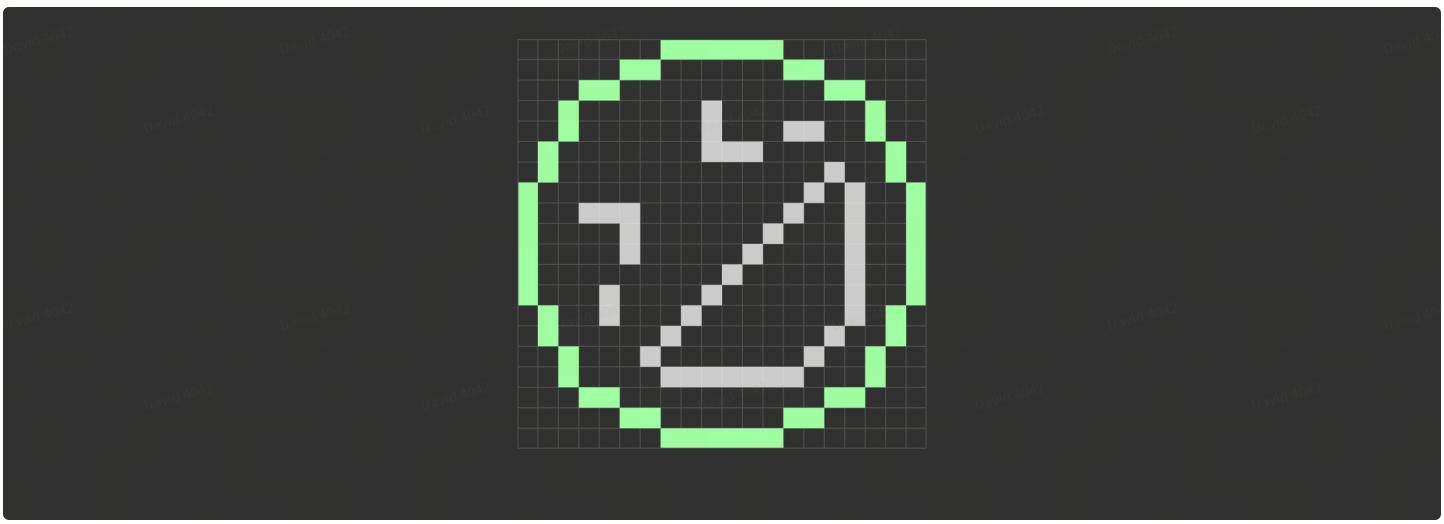
—Face emoji breakdown

Normally, face emojis are composed of a **face outline, eyebrows, eyes, a mouth, and decorative elements**. However, this structure is not fixed—depending on the emoji, one or more elements may be omitted to achieve clearer expression.



—Face outline:

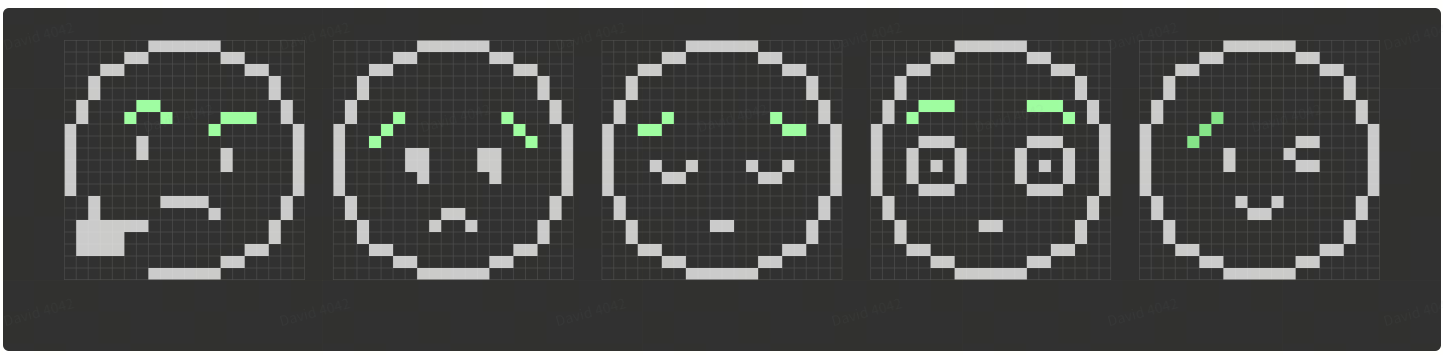
Defines the overall shape and proportion of the face. The face outline should strictly follow the grid (highlighted in green) shown below.



—Eyebrows:

Used to convey emotion and intensity. Eyebrows should remain minimal in shape.

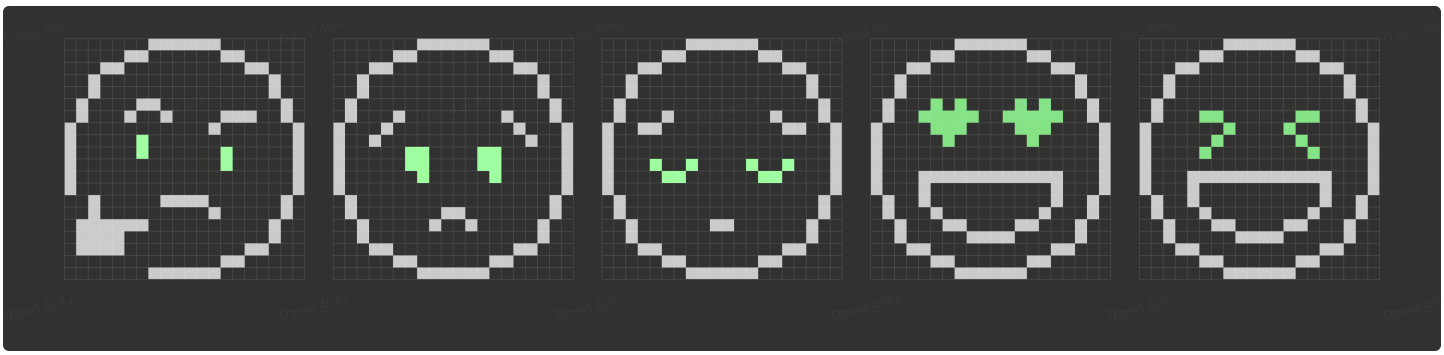
Examples:



—Eyes:

The primary driver of expression. Eye shapes can be adapted to fit different emotional states or symbolic meanings, such as using hearts or other simple forms when appropriate.

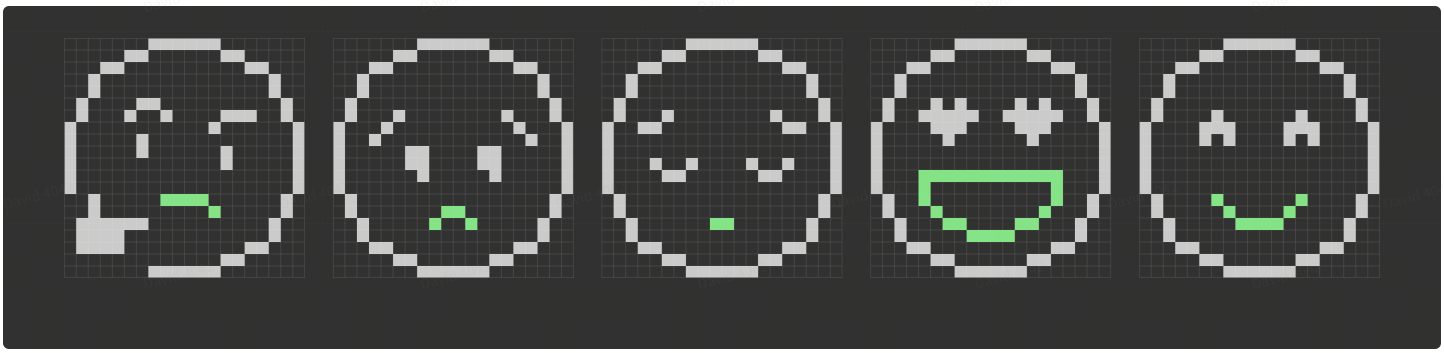
Examples:



—Mouth:

Supports the emotional expression established by the eyes and eyebrows.

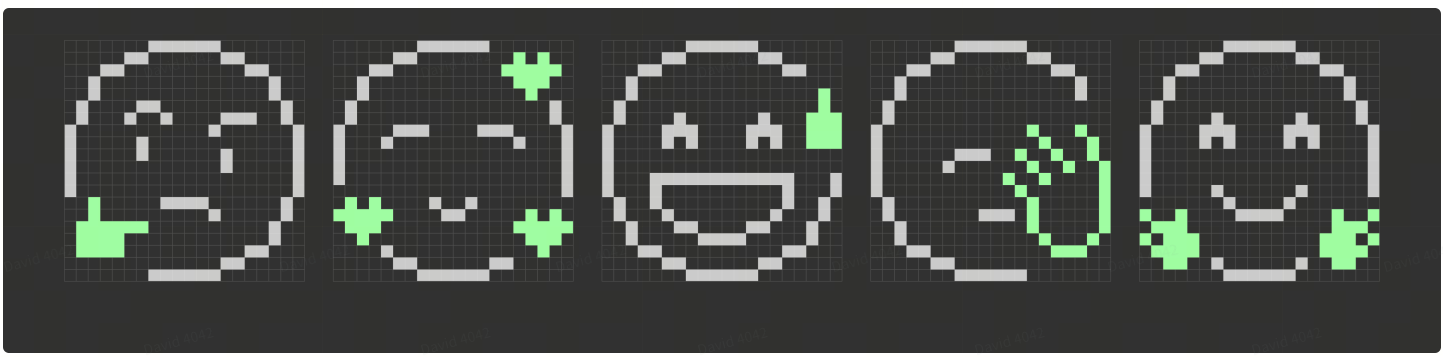
Examples:



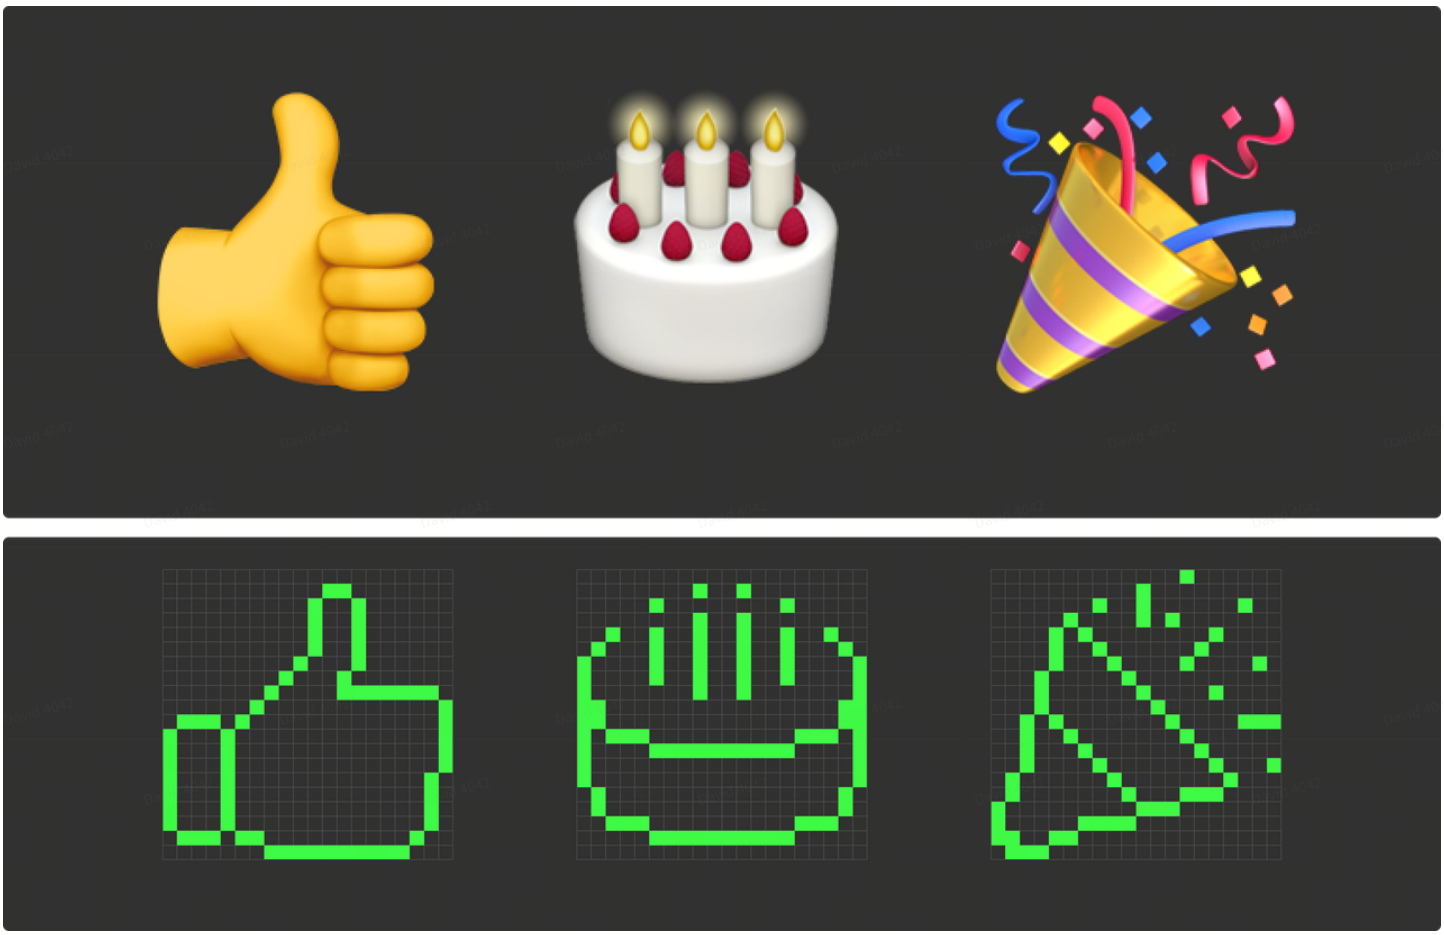
—Decorative elements:

Optional elements such as hands, tears, sweat drops, heart ,or accessories that enhance expression or meaning. These should be used sparingly and never overpower the core facial features.

Examples:



Gestures & Objects

When designing pixelated gestures and object emojis, **prioritize clarity over realism**. Start by defining a **strong, simplified silhouette** that is immediately recognizable at small sizes. Avoid unnecessary details, textures, or perspective effects.


Examples:
